OVERARCHING GOAL OF THE SWEDISH STRATEGY:

Preserve the possibility of effective treatment of bacterial infections in people and animals

Photo SVA, Bengt Ekberg

IT IS NOT ONLY ABOUT PUBLIC HEALTH

Example: multiresistance in
Brachyspira hyodysenteriae

Czech Rep. 2000-2005:
32 farms with "*B. hyo*"
All R against tiamulin & valnemulin
– 3 sensitive to tylosin
– 3 sensitive to doxycyklin

SALES OF ANTIBIOTICS FOR FOOD PRODUCING ANIMALS 2014 (29 COUNTRIES)

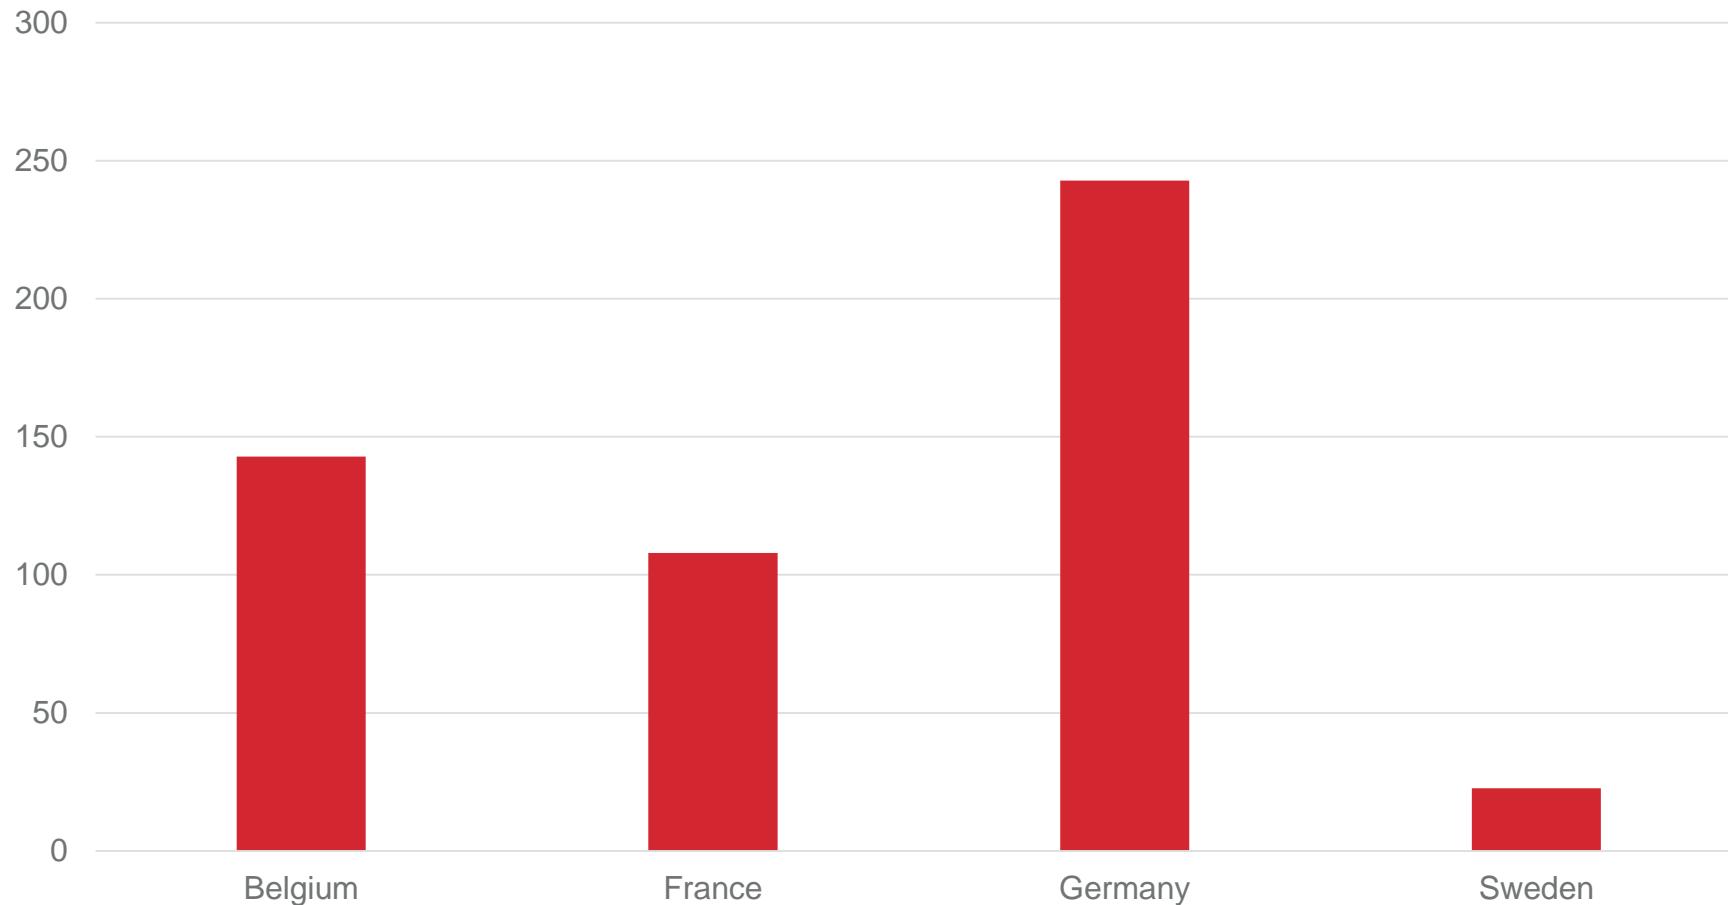

Average: 152 mg/PCU, Sweden 12 mg/PCU

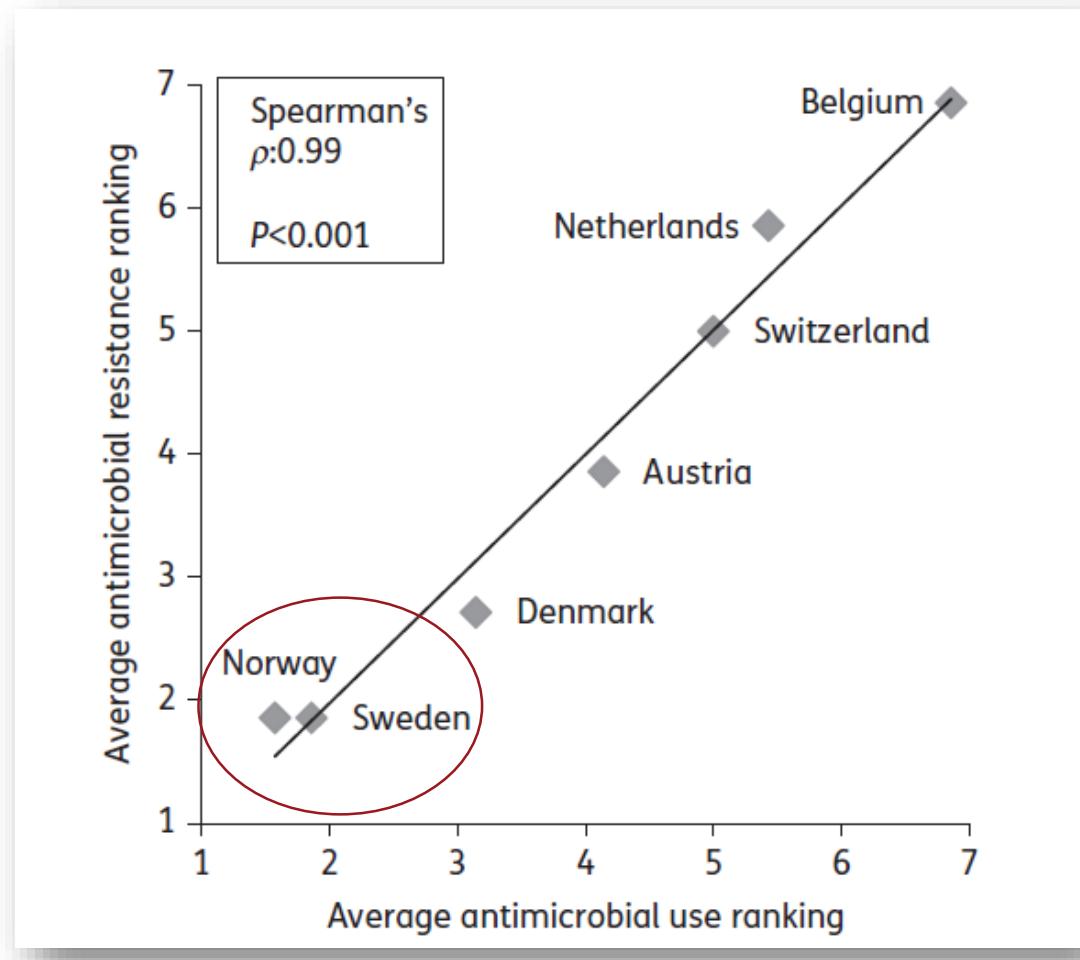

PCU =
population
correction
unit, similar
to live
biomass

SALES OF ANTIMICROBIALS FOR ANIMALS, SWEDEN

Source: Swedres-Svarm 2013.

Note that from 2010 there is a lack of completeness
in the data reported from pharmacies.

IT IS NOT ONLY ABOUT ANTIBIOTICS

- salmonella control
- animal welfare
- non use of antibiotic growth promoters
- control or eradication of several infectious diseases (PRRS, Aujeszky's disease, IBR ...)

- internal and external biosecurity
- 'prudent use' of antibiotics
- problem solving "at the root" if possible

SWEDEN: CLOSE COLLABORATION FOR BETTER IMPLEMENTATION OF GOOD TECHNIQUES

smittsäkra.se

Startsida | Nöt | Gris | Får | Gårdens besökare | Intresseanmälan | Sök »

Välkommen till smittsäkra.se.

Detta är en informationssida om smittskydd för lantbruksdjur. Smittsäkra.se värder sig till dig som är djurägare, djurskötare eller i yrket kommer i kontakt med lantbruksdjur.

På dessa sidor finns smittskyddsråd, fördjupad information om smittsamma sjukdomar och hur de sprids, samt ett självtest för bedömning av smittskyddet på gården. Här finns också information om det nya frivilliga smittskyddsprogrammet Smittsäkra Besättning för gris- respektive nötkreatursbesättningar.

Smittsäkra.se drivs av Gård & Djurhälsan och Växa Sverige i samarbete med SVA. Sidan finansieras av Jordbruksverket.

USE OF ANTIMICROBIALS FOR CHICKENS, SE

Year	Flocks treated	Total N of flocks
2011	6	3185
2012	1	2853
2013	4	3133
2014	4	3138
2015	28	3191

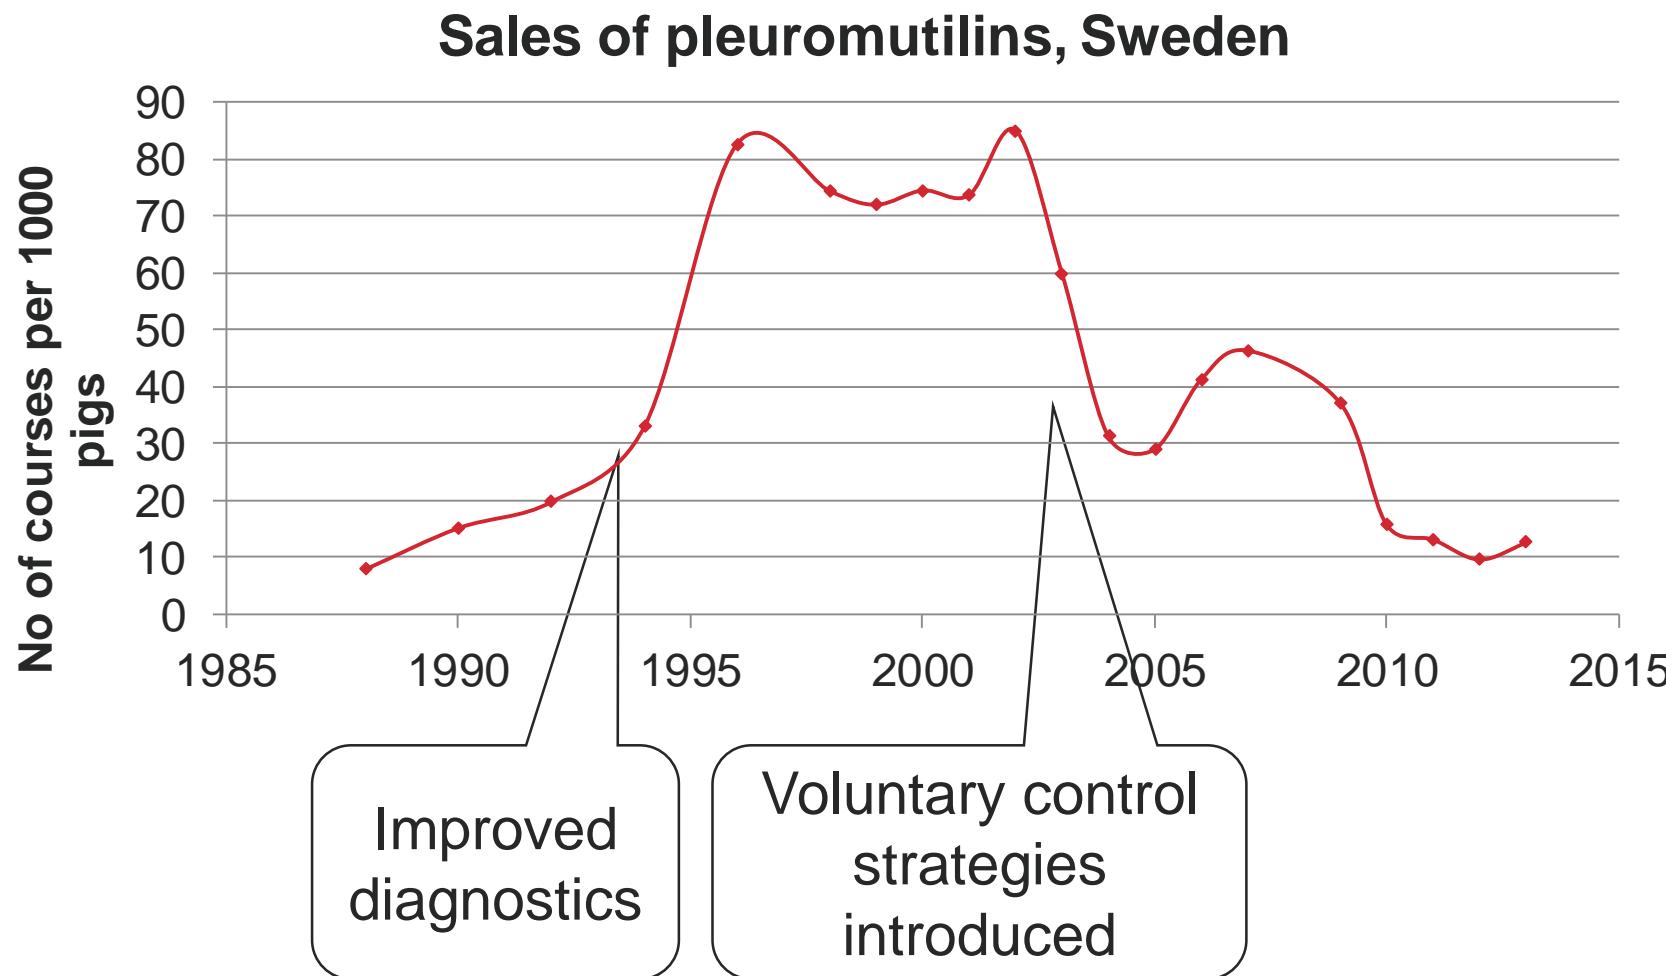

Note:

Ionophores are used in almost all flocks.

Swedres-Svarm 2011-2014; based on data from the Swedish Poultry Meat Association

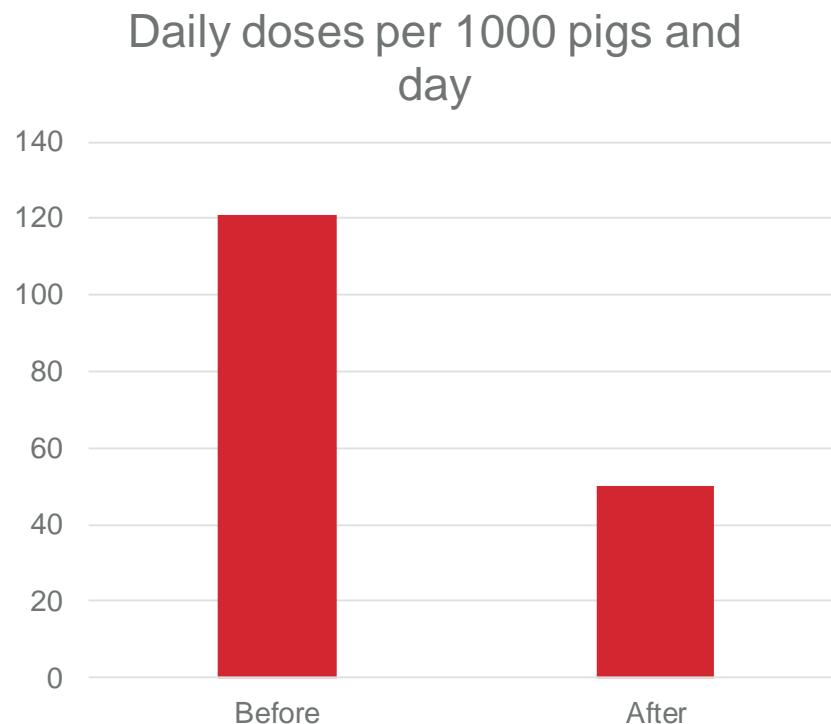

REDUCING THE NEED: CONTROL OF SWINE DYSENTERY

FIRST CHOICE FOR TREATMENT: PLEUROMUTILINS

Based on data from Swedres-Svarm, www.sva.se

EFFECT OF TAILORED HERD HEALTH ADVICE, PIG PRODUCTION BELGIUM

- No negative impact on production
- +2.67 Euro per pig

Source: Postma et al, Zoonoses and public health, 2016,
doi: 10.1111/zph.12283 & Rojo-Gimeno et al, Prev vet med 2016 129:74-

WE NEED MODERN TOOLS

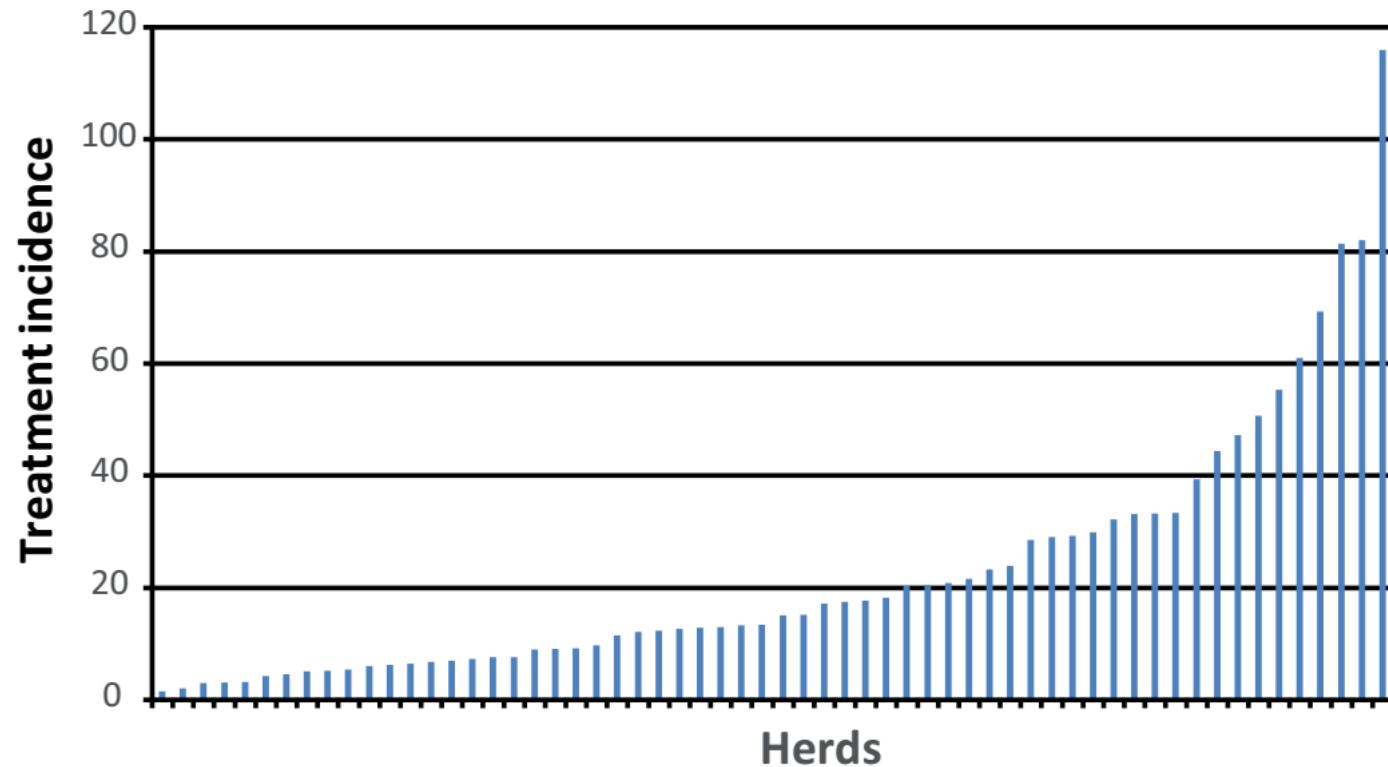

Fig. 1. Antimicrobial treatment incidences for growing pigs, with a standardized lifespan of 200 days and expressed as treatment incidence per 1000 pig-days at risk, for 60 Swedish farrow-to-finish herds.

A COMPOSITE STRATEGY

Remove unnecessary use

= growth promoters, routine prophylaxis

Avoid spread

= biosecurity, infection control, food hygiene etc.

Minimise need

= keep animals healthy

Optimise use when needed

= diagnosis, correct selection & dose

Monitor

= use and resistance
