Overall effects of climate change

Future

Impact

Likelihood

Higher impact and likelihood of emergence in the future

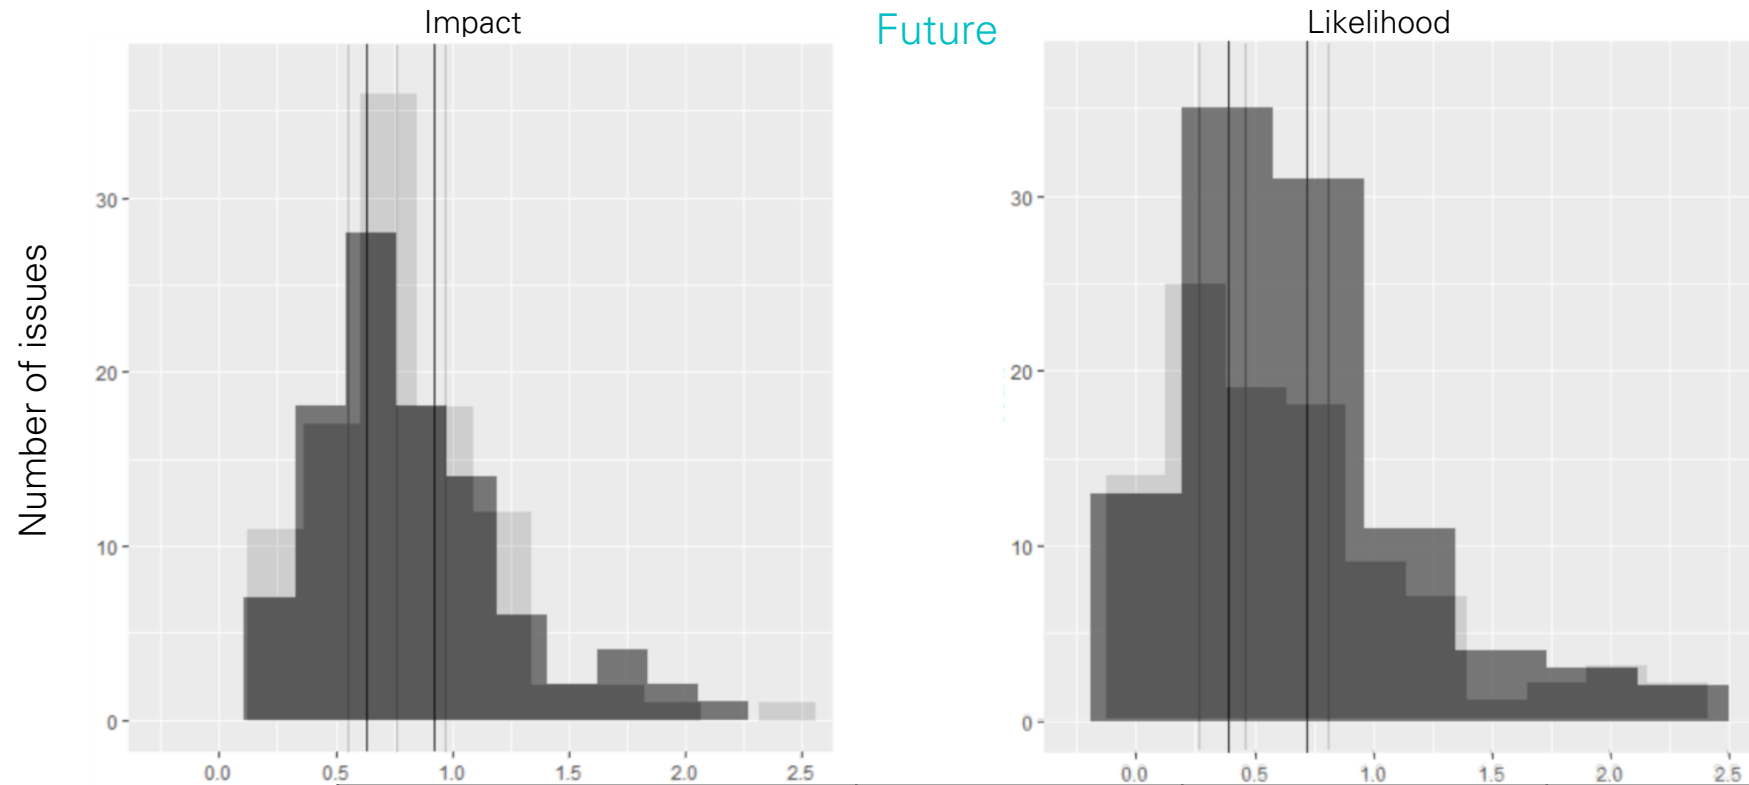

Indicators of the effects of climate change (delta)

Higher delta for likelihood

				
Impact	<i>Climate change may have a positive or no effect on the impact of the considered hazard with respect to the reference condition</i>	<i>Climate change may have a mild detrimental effect on the impact of the considered hazard with respect to the reference condition</i>	<i>Climate change may have a moderate detrimental effect on the impact of the considered hazard with respect to the reference condition</i>	<i>Climate change may have a serious detrimental effect on the impact of the considered hazard with respect to the reference condition</i>
	[-0.2;0.01]	[0.01;0.17]	[0.17;0.29]	[0.29;1.08]
Likelihood	<i>Climate change may have a positive or no effect on the likelihood of emergence with respect to the reference condition</i>	<i>Climate change may mildly increase the likelihood of emergence of the issue with respect to the reference condition</i>	<i>Climate change may moderately increase the likelihood of emergence of the issue with respect to the reference condition</i>	<i>Climate change may seriously increase the likelihood of emergence of the issue with respect to the reference condition</i>
	[-0.9;0]	[0;0.26]	[0.26;0.64]	[0.64;2]

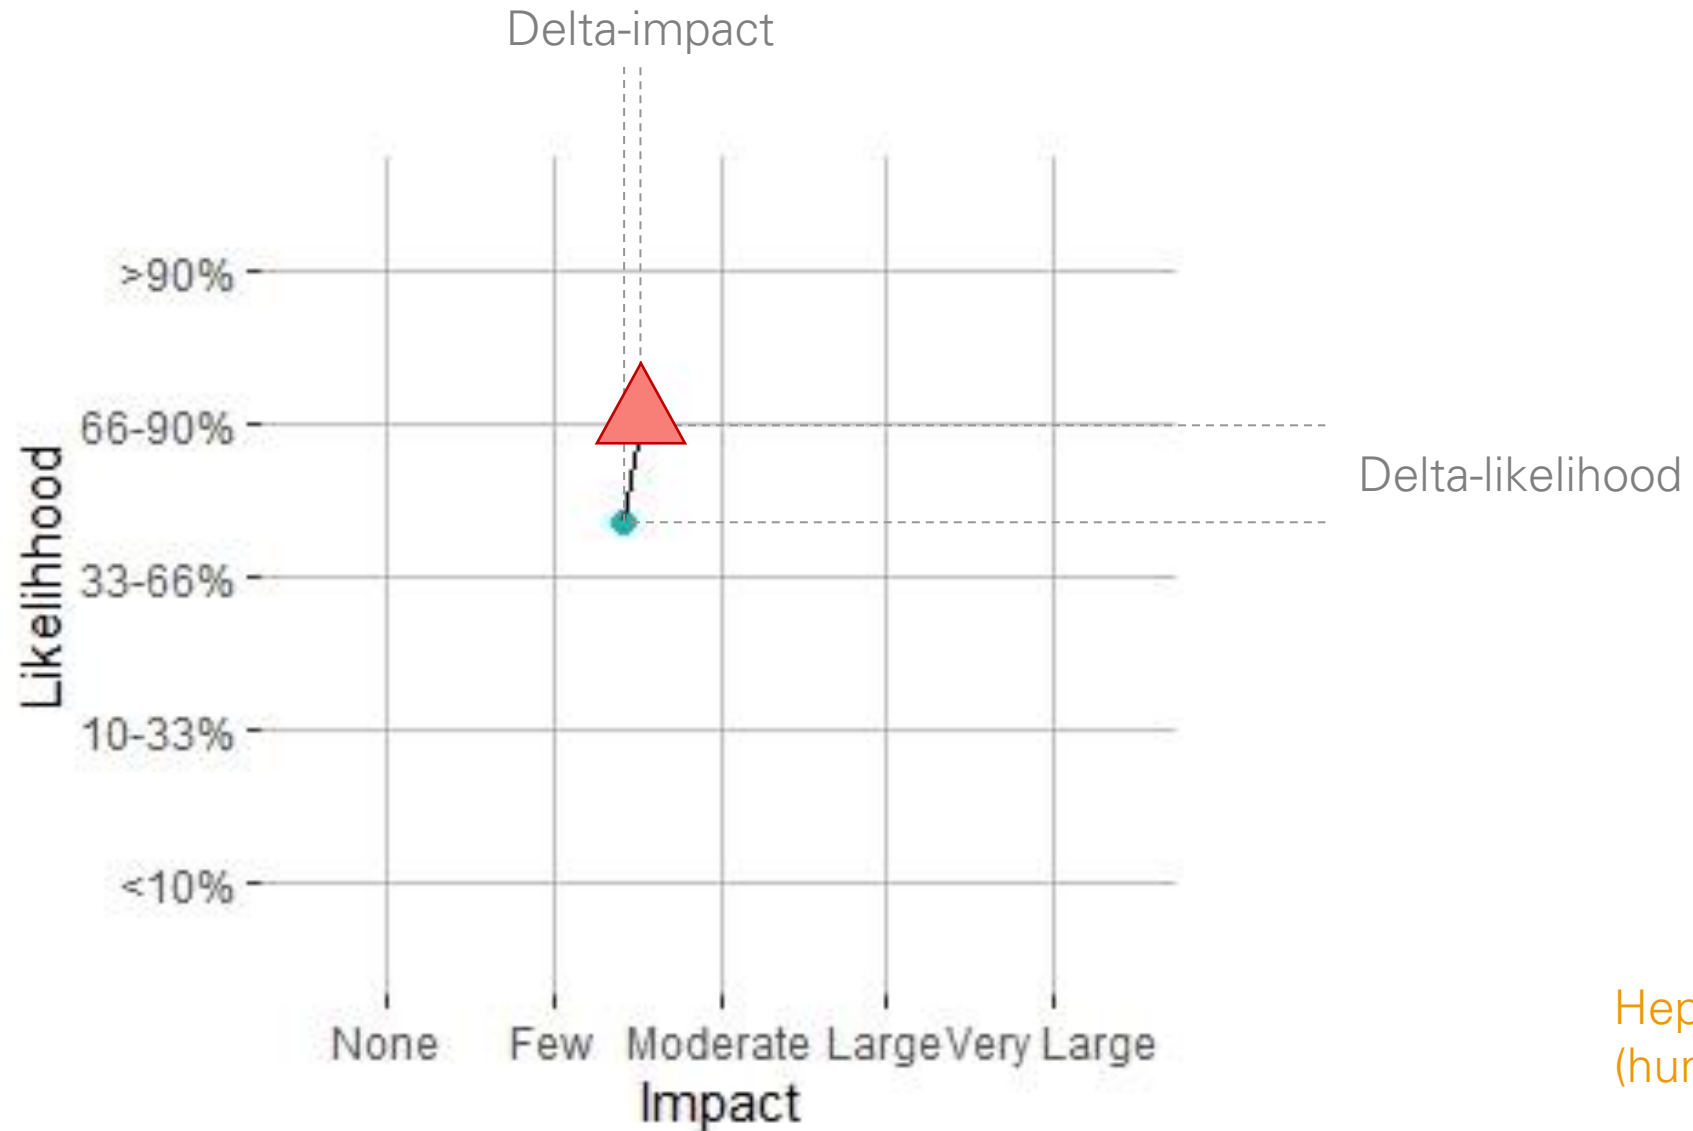

Indicators of the uncertainty (dispersion)

Higher uncertainty for impact

Confidence level indicator			
<i>Impact/description</i>	<i>High confidence</i>	<i>Medium confidence</i>	<i>Low confidence</i>
<i>Impact/range</i>	[0;0.68]	(0.68;1.03]	(1.03; 2.13]
<i>Likelihood/description</i>	<i>High confidence</i>	<i>Medium confidence</i>	<i>Low confidence</i>
<i>Likelihood/range</i>	[0; 0.37]	(0.37;0.71]	(0.71;3.51]

Indicators of the effects of climate change (delta)

2D visualisation of all issues (future scenario)

LIKELIHOOD OF EMERGENCE	Score
Very Unlikely: $\leq 10\%$	1
Unlikely: $\leq 33\%$	2
About as likely as not: $\approx 50\%$	3
Likely: $\geq 66\%$	4
Very likely: $\geq 90\%$	5

Description	With the increased air temperature due to climate change, the risk of heat stress in livestock increases too. Analyses based on the Temperature-Humidity-Index could demonstrate this effect. In dairy cows, rising temperatures at high humidity have a negative effect on feed intake and milk yield and thus changes the quality of milk. Further, prolonged heat stress can affect reproduction, growth and health of animals.

Impact on other areas																		
Scoring experts	<p>Total no. of experts: 4</p>  <table border="1"> <caption>Expertise Level Distribution</caption> <thead> <tr> <th>Expertise level</th> <th>Number of experts</th> </tr> </thead> <tbody> <tr> <td>Low</td> <td>0</td> </tr> <tr> <td>Medium</td> <td>1</td> </tr> <tr> <td>High</td> <td>3</td> </tr> <tr> <td>Very high</td> <td>0</td> </tr> </tbody> </table>								Expertise level	Number of experts	Low	0	Medium	1	High	3	Very high	0
Expertise level	Number of experts																	
Low	0																	
Medium	1																	
High	3																	
Very high	0																	

	climate change	confidence level	
Impact	Climate change may have a serious detrimental effect on the impact of the considered hazard with respect to the reference condition (Delta value: 1.079)	Medium (Variance: 0.738)	
Likelihood	Climate change may seriously increase the likelihood of emergence of the issue with respect to the reference condition (Delta value: 1.424)	Medium (Variance: 0.393)	

Characterisation

Ambiguity

- Different understanding and interpretation of the issues and criteria

Expert group composition

- Number of experts involved for each issue characterization
- Level of knowledge of an expert on the considered issue

Divergences in the assessment between experts

- Different expertise, different background knowledge

Scenario selection and its uncertainty

- Missing variables describing climate change conditions
- Need for disaggregate to single element of climate change (e.g. temperature only)

Analysis

Probability distribution choice

- How close the chosen form of distribution (Pert) represents the expert judgment

Dependency between sources of uncertainty

- Dependency between the two criteria, impact and likelihood, and among impact subcriteria
