TRENDS AND SOURCES OF ZOONOSES AND ZONOTIC AGENTS IN FOODSTUFFS, ANIMALS AND FEEDINGSTUFFS

including information on foodborne outbreaks,
antimicrobial resistance in zoonotic and indicator bacteria
and some pathogenic microbiological agents

IN 2016

PREFACE

This report is submitted to the European Commission in accordance with Article 9 of Council Directive 2003/99/EC*. The information has also been forwarded to the European Food Safety Authority (EFSA).

The report contains information on trends and sources of zoonoses and zoonotic agents in Ireland during the year 2016.

The information covers the occurrence of these diseases and agents in animals, foodstuffs and in some cases also in feedingstuffs. In addition the report includes data on antimicrobial resistance in some zoonotic agents and indicator bacteria as well as information on epidemiological investigations of foodborne outbreaks. Complementary data on susceptible animal populations in the country is also given. The information given covers both zoonoses that are important for the public health in the whole European Union as well as zoonoses, which are relevant on the basis of the national epidemiological situation.

The report describes the monitoring systems in place and the prevention and control strategies applied in the country. For some zoonoses this monitoring is based on legal requirements laid down by the European Union legislation, while for the other zoonoses national approaches are applied.

The report presents the results of the examinations carried out in the reporting year. A national evaluation of the epidemiological situation, with special reference to trends and sources of zoonotic infections, is given. Whenever possible, the relevance of findings in foodstuffs and animals to zoonoses cases in humans is evaluated.

The information covered by this report is used in the annual European Union Summary Reports on zoonoses and antimicrobial resistance that are published each year by EFSA.

1 INFORMATION ON SPECIFIC ZONOSSES AND ZONOTIC AGENTS

Zoonoses are diseases or infections, which are naturally transmissible directly or indirectly between animals and humans. Foodstuffs serve often as vehicles of zoonotic infections. Zoonotic agents cover viruses, bacteria, fungi, parasites or other biological entities that are likely to cause zoonoses.

1.1 SALMONELLOSIS

1.1.1 Salmonella in animals

1.1.1.1 S. 13,23:-:- in animal - Gallus gallus (fowl) - broilers - Farm - environmental sample - boot swabs - Control and eradication programmes - Official and industry sampling - Census

Additional information

Salmonella spp. sampling was carried out in accordance with Salmonella monitoring programme.

1.1.1.2 S. 13,23:i:- in animal - Gallus gallus (fowl) - broilers - Farm - environmental sample - boot swabs - Control and eradication programmes - Official and industry sampling - Census

Additional information

Salmonella spp. sampling was carried out in accordance with Salmonella monitoring programme.

1.1.1.3 S. 8,20:-:- in animal - Gallus gallus (fowl) - broilers - Farm - environmental sample - boot swabs - Control and eradication programmes - Official and industry sampling - Census

Additional information

Salmonella spp. sampling was carried out in accordance with Salmonella monitoring programme.

1.1.1.4 S. Derby in animal - Gallus gallus (fowl) - broilers - Farm - environmental sample - boot swabs - Control and eradication programmes - Official and industry sampling - Census

Additional information

Salmonella spp. sampling was carried out in accordance with Salmonella monitoring programme.

1.1.1.5 S. Kentucky in animal - Gallus gallus (fowl) - broilers - Farm - environmental sample - boot swabs - Control and eradication programmes - Official and industry sampling - Census

Additional information

Salmonella spp. sampling was carried out in accordance with Salmonella monitoring programme.

1.1.1.6 S. Kentucky in animal - Meat from broilers (Gallus gallus) - carcass - chilled - Slaughterhouse - food sample - neck skin - Monitoring - HACCP and own check - Objective sampling

Additional information

Salmonella spp. sampling was carried out in accordance with Salmonella monitoring programme.

1.1.1.7 S. Mikawasima in animal - Gallus gallus (fowl) - broilers - Farm - environmental sample - boot swabs - Control and eradication programmes - Official and industry sampling - Census

Additional information

Salmonella spp. sampling was carried out in accordance with Salmonella monitoring programme.

1.1.1.8 S. Orion in animal - Gallus gallus (fowl) - laying hens - Farm - environmental sample - boot swabs - Control and eradication programmes - Official and industry sampling - Census

Additional information

Salmonella spp. sampling was carried out in accordance with Salmonella monitoring programme.

1.1.1.9 S. Typhimurium in animal - Gallus gallus (fowl) - broilers - Farm - environmental sample - boot swabs - Control and eradication programmes - Official and industry sampling - Census

Additional information

Salmonella spp. sampling was carried out in accordance with Salmonella monitoring programme.

1.1.1.10 Salmonella spp., unspecified in animal - Gallus gallus (fowl) - broilers - Farm - environmental sample - boot swabs - Control and eradication programmes - Official and industry sampling - Census

Additional information

Salmonella spp. sampling was carried out in accordance with Salmonella monitoring programme.

2 ANTIMICROBIAL RESISTANCE INFORMATION ON SPECIFIC ZONOSES AND ZONOTIC AGENTS

2.1 CAMPYLOBACTERIOSIS

2.1.1 Campylobacter in animals

2.1.1.1 Antimicrobial resistance in *C. jejuni* Gallus gallus (fowl)

Additional information

In 2016, the focus of the official AMR surveillance carried out under 2013/652/EU was the broiler sector. 174 isolates of *Campylobacter jejuni* were cultured from broiler caeca at slaughter and underwent testing; resistance levels were comparable to those seen in equivalent isolates from 2014, when broilers were last screened. Poultry caecal samples were taken in all factories that slaughter poultry. Due to the small number of poultry flocks available for sampling, all flocks were sampled and in some cases it was necessary to take repeat samples from certain flocks in order to get the required number of isolates.

2.2 ESCHERICHIA COLI, NON-PATHOGENIC

2.2.1 Escherichia coli, non-pathogenic in foodstuffs

2.2.1.1 Antimicrobial resistance in *E.coli*, non-pathogenic, unspecified Meat from broilers (*Gallus gallus*)

Additional information

In relation to the retail fresh meat samples, this sampling was carried out nationwide, broken down by county with the choice of premises left up to the sampling officer to select and sampling was done on a convenience basis. Three hundred samples of broiler caeca and broiler meat were screened for ESBL/ Amp- C and Carbapenamase producing *E. coli* using specific selective methods. These selective agars inhibit the growth of susceptible bacteria, allowing resistant bacteria that are present at low levels to be detected. Using these selective media to detect even low levels of resistant bacteria, ESBL/ Amp-C producing *E. coli* were isolated from 262 caecal and 198 broiler meat samples. No Carbapenamase producing *E. coli* were detected.

Additional information

In relation to the retail fresh meat samples, this sampling was carried out nationwide, broken down by county with the choice of premises left up to the sampling officer to select and sampling was done on a convenience basis. A single isolate of *E. coli* from an imported meat sample was Colistin resistant.

2.2.2 Escherichia coli, non-pathogenic in animals

2.2.2.1 Antimicrobial resistance in *E.coli*, non-pathogenic, unspecified *Gallus gallus* (fowl)

Additional information

170 isolates of indicator commensal *Escherichia coli*, also from caeca, were tested; 4 of these were ESBL/ Amp-C producers. Poultry caecal samples were taken in all factories that slaughter poultry. Due to the small number of poultry flocks available for sampling, all flocks were sampled and in some cases it was necessary to take repeat samples from certain flocks in order to get the required number of isolates.

Additional information

Three hundred samples of broiler caeca and broiler meat were screened for ESBL/ Amp- C and Carbapenamase producing *E. coli* using specific selective methods. These selective agars inhibit the growth of susceptible bacteria, allowing resistant bacteria that are present at low levels to be detected. Using these selective media to detect even low levels of resistant bacteria, ESBL/ Amp-C producing *E. coli* were isolated from 262 caecal and 198 broiler meat samples. No Carbapenamase producing *E. coli* were detected.
